

User | receiveAlerts():void

>> How does this happen? Should I create a method `sendAvailabilityAlert()` within `Tools`?

>> AvailableDates: Stores an array of dates when the tool is available for use. -> JSON?

>> Easily Updateable: Lenders can set or modify the available dates through the calendar entity.

>> Calendar to be updated when tool is borrowed (= new object in **Borrow**)

>> Aim: user to select a category (set by cdev) within a dropdown. How? Enum? Something else?

General: Unser about all methods + properties (via symfony) viability
